The manuscript for the “1-page abstract” should be prepared in accordance with these instructions. Each abstract must be divided into two parts. The first part includes the title, authors’ names, affiliations, and addresses. The second part is the main body of the abstract.

Authors are requested to prepare the abstract on A4 paper, in English, and in Portable Document Format (PDF). The size of the electronic file should not exceed 5MB. It should be within one page, with 25mm margins on all sides, in one-column format. The symposium requires a font size of 10 points or greater. Some technical formatting programs print mathematical formulas in italics, with subscripts and superscripts in a slightly smaller font size.

If your paper deviates significantly from these specifications, it may not be accepted by the symposium. Please conform to the following instructions.

**Title** The title should be centered across the top of the first page a distinctive point size or font.

**Author’s Names and Address** The authors’ names and addresses should be centered below the title. Times New Roman, 10 points, is suggested. Please include your email address.

**Figures and Tables** Figures and photos should be numbered consecutively (e.g., Fig. 1, Fig. 2). Figures should be inserted near their citation or at the end of the manuscript. Large figures and tables may span both columns if necessary. Figure captions should be placed below the figures.

**References** List and number all references at the end of the paper. Reference citations should be numbered consecutively in square brackets, such as [1]. For the convenience of authors, it is recommended that the standard ASME reference format be followed.

**Page Numbers** Do not include page numbers in your manuscript. These will be added later by the proceedings’ printer, along with the session number and symposium identifiers.
